

## ***Lake Champlain Research Consortium 2012 Spring Student Symposium***

The 2012 Lake Champlain Research Consortium Student Symposium will be held on Saturday, April 28, 2012 at 9:30 am in Bentley Hall at Johnson State College in Johnson, VT. We welcome presentations by undergraduate and graduate students that focus on various aspects of the Lake Champlain Basin, or on related topics that have an aquatic or watershed emphasis. Presentations may cover topics in the natural sciences, social sciences, or humanities. Students who received research support from the LCRC in the past year are expected to present, but others also are welcome. Research may be completed, underway, or in the formative stages.

Oral presentations will be limited to 20 minutes, including time for questions. Poster presentations also are invited, and poster authors will be asked to briefly summarize their poster for the entire group. We ask all who attend to show their support for all students engaged in research by remaining for the entire program, if possible; lunch will be provided.

Students interested in presenting their research should provide their name, the title of their presentation, name of faculty advisor, department, and school by April 9 so that we may prepare the program. Anyone interested in attending should contact Bob Genter ([bob.genter@jsc.edu](mailto:bob.genter@jsc.edu)) by April 9, and presenters please let us know if you will have guests attending, so that we may plan accordingly.

We hope to see you at Johnson State College on April 28! Thank you for your support and participation.

Bob Genter
