Graphene Tattoo and YOUR Health?

How a graphene tattoo could monitor your health

A graphene-based tattoo that could function as a wearable electronic device to monitor health has been developed at the University of Texas.

Gold is often used in electronic components, but graphene is more conductive, can be hundreds of times thinner and allows the tattoo to wrinkle naturally with skin.

It is hoped that as the cost of graphene falls, such tattoos will become affordable for medical use.

BodyHack Conference - Austin Texas

The bodyhackers enhancing the human form

Would you add new body parts or change what your limbs were capable of doing, if you were given the choice?

The BBC's Dave Lee visited Austin, Texas to meet the biohackers determined to push the human body - and the law - into new territory.

Lab-grown meat is in your future, and it may be healthier than the real stuff

By Marta Zaraska May 2, 2018

Samples of beef including hamburger from a store, left, cultured beef, center, and raw beef. (Maastricht University via Bloomberg)

Scientists and businesses working full steam to produce lab-created meat claim it will be healthier than conventional meat and more environmentally friendly. But how much can they improve on old-school beef?

In August 2013, a team of Dutch scientists showed off their lab-grown burger (cost: \$330,000) and provided a taste test. Two months ago, the American company Memphis Meats fried the first-ever meatball (cost: \$18,000 per pound). Those who have tasted these items say they barely differ from real.

China's 'first AI news anchor'

China's state news agency has unveiled a virtual newsreader sporting a sharp suit and a somewhat robotic voice.

Xinhua News claims the presenter "can read texts as naturally as a professional news anchor", though not everyone may agree.

"Hello, you are watching English news programme," says the English-speaking presenter at the start of his first report.

Sogou, a Chinese search engine, was involved in the system's development.

"I will work tirelessly to keep you informed as texts will be typed into my system uninterrupted," says the presenter in an introductory video.

"I look forward to bringing you the brand new news experiences."
